1. The State Research Institute of Mathematics (Panstwowy Instytut Matematyczny) was located in Warsaw at 8 Sniadeckich Street. [redacted] do not know to which ministry it was subordinate.
2. [redacted] they were working on electronics equipment for the solution of differential equations. They had completed a model which was called an "electronic brain" (elektronowy mozg). This instrument was to contain about 300 electronic tubes. The accuracy of this machine was said to be $\pm 10\%$ but in some cases the accuracy fell to about $\pm 50\%$. They did not expect this machine to be completed before 1955. Construction of the chassis and accessories of the electronic brain was to be completed by the Elektromatyka (cooperative workshop).
